Video screening of analogue created anamorphic reflections with music from Didi Fire.

Art* is an equalizer for the sound of the universe.

Quantum communication is a language of the universe, light and sound waves / not only since the new QC computer technology but since light and sound existed. Nature communicates with electromagnetic waves whether flora or fauna, all known and unknown energy and matter, the sum of everything that is perceptible though not consciously comprehensible as a whole. Everything vibrates in interactions between attraction, repulsion entanglement and arises from a universe of possibilities.

Inspired by this idea/assumption, I created the light membranes and the anamorphic videos. A playful way to visualize theories of physics, escape Plato's cave and dive into the rabbit hole of possibilities. Welcome to the journey. LvL

P.S. We organized a live membrane event in the Art Loft Berlin 6 years ago during the KFWM Festival and are looking forward to new ones in the ALB, which has now grown to 360m².
